

Energy in Excellence

The 3rd Energy package, new energy regulation industry requirements, energy market liberalisation, increased competition, all of these bring new challenges to the energy market participants that they have to face to. Based on many years experience our team offers to change these challenges to new business opportunities. We provide our clients with tailor-made solutions not only for the following target groups and areas:

Government / National Regulatory Authorities

- The 3rd EU Energy Package implementation and monitoring – harmonization of EU and national market rules
- Unbundling process management
- Market model designing, increased market transparency
- Tariffs modelling based on different approaches (cost based methodologies as price cap, WACC), entry-exit tariff system, review of the price control mechanism with an aim to set more efficient and competitive energy prices
- Strengthening position of National Regulatory Authorities, regulatory and energy policy support, market stakeholder roundtable arrangements
- Consultancy and support to increase efficiency in fully or partly state owned energy companies
- Energy efficiency audit

Industry

- New regulation impact analysis
- Relationship with NRA - National Regulatory Authority and monitoring of national regulatory requirements
- Individual network codes designing and implementation (i.e. Balancing network code, Interoperability network code)
- Infrastructure operators process management
- Compliance with legal and regulatory requirements as EMIR, REMIT, MIFID II , etc.
- Alternative energy sources & Energy efficiency - audit of energy sources, benchmark of the alternative energy suppliers, arrangement of a procurement process, auctions including appropriate terms and conditions, set measures with an aim of respective

DANUBE CAPITAL ADVISORS

energy savings (e.g. more competitive energy formula, more efficient balancing conditions, proper capacity bookings and supplementary services, etc.)

- Risk management and business continuity of operations
- Creation of innovative and smart solutions, IT products (functional specifications, key business analysis, information security management, smart IT systems, etc.)

Investors / Advisors

- National legal and regulatory environment specifications
- Energy market monitoring
- Due diligence
- Risk management
